# Fertilizer Financial Markets Commentary/Curves

# **NOLA FUTURES & SWAPS**

### **UREA**

NOLA urea futures went untraded again today. The Indian tender came in a bit larger than expected, and though this is most directly supportive to the INTL markets, many domestic sources felt that this was postive for NOLA prices as well. Still, activity was quiet.

### <u>UAN</u>

UAN futures prices were mostly steady today. Buyer interest seemed to be slightly more pronounced, but sellers were still not excited at current levels.

#### DAP

DAP was the only paper fertilizer contracts to trade today, with both JAN and FEB trading once at \$378. This was down \$2-\$3 from the last trades on Monday and down \$5 from last week.

## INTERNATIONAL FUTURES

Urea paper markets were rangebound again today, with news of the volume accepted in MMTC's tender (1.27mn tonnes) not driving momentum significantly in either direction. Market sentiment following the news was positive, with consensus that prices will be supported into Q121. However, there remains a lack of impetus from both buyers and sellers on paper at current levels, with most playing wait and see on the next price direction.
