	CAL-22	154.50	158.50	156.50

Market Commentary

The near term futures continue to tick over with Jan, Feb and March all trading today in small volume. Again the market felt better bid although we did see another low print, this time in March. Jan remains well supported around 109. Feb is above 120 again and March traded up at 138. Still yet to see that physical index find direction yet.
