Fertilizer Derivatives End of Day Report NOLA FUTURES & SWAPS

LIREA

Values on NOLA UREA continue to firm to end the week in what we're describe as "the flash crash of 2021". After seeing physical barges for the SEPT timeframe trade down to \$402 for Sept on Wednesday, we saw SEPT barges trade up to \$431 today to end the week, up nearly \$30 in two days. Values on August barges were firmer as well trading up to \$425 for August up from \$418 value at the start of the day. In the futures market, Q4 and Q1 traded at \$430 up \$5 from last done and then January traded at \$438 to end the day up \$30 from where it traded at the low on Wednesday. You might ask, what is driving the market right now, and that's seems to be unclear right now. The international physical market seems quiet for now, and NOLA seems that it's getting in line with the rest of the world on a relatively value basis.

UAN

UAN continues to see traction on Q4 and Q1 in the low teens trading at \$312 for January today down a couple dollars from last done but within range.

DAF

Values on DAP are up in the nearby with the first week print being higher for August than last done on futures.

INTERNATIONAL FUTURES

Values on INTL paper were firmer today as bids start to creep up without a clear catalyst in the physical market. It seems that traders are getting ahead of the next move up as they bid the market a touch higher throughout the forward curve on AG as well as in Egypt. In the AG market we saw September trade \$470 up \$2 from last done yesterday. Values were also firmer on Q4 bid up to the low \$440s. In the Egypt market, the SEPT contract traded \$463 up close to \$10 from where we were marking value at COB vesterday.
