Fertilizer Derivatives End of Day Report

NOLA FUTURES & SWAPS

<u>UREA</u>

Despite an unchanged domestic fundamental picture, urea values in NOLA were seen as a bit softer than yesterday. March futures traded at \$715 for a total of 10,500 tons. The Q2 futures strip traded at \$720 mid morning, and shortly after at \$712.50 for 3,000 tons per month. We did not observe anything trading in the physical markets, so it seems as though sellers were just a bit more anxious to get something done without new fundamental developments. Participants are still looking forward to the next Indian tender, and more information on China's export restrictions.

<u>DAP</u>

NOLA DAP markets were range bound today, and the only cleared futures trade was seen as higher than yesterday's value, sellers were more numerous than buyers. Only the Q1 futures strip traded today at \$674, and this was steady to \$1 higher than where value was late yesterday afternoon. Corn prices have been trending sideways and have not given Phosphates a strong signal one way or another.

INTERNATIONAL FUTURES

Signs of life returned to the physical market today, with \$845/mt fob Egypt reported after a period of relative inactivity. Although the price was \$15 above the last done level on physical, more interest continued to be seen from the sell side through Q4 and Q1 on paper, against limited buying interest. It was a similar story on Brazil urea, with demand not evident around last done levels on paper, whilst AG urea remains dormant with limited direction from the physical market.
