Market Commentary / Recent Trades

Iron ore corrected \$2 today amid negative industrial data and a higher-than-expected Chinese GDP in the third quarter. After several rounds of stimulus to bolster economic recovery, China's Q3 GDP grew 4.9% YoY and 1.3% QoQ, indicating a steady growth, according to the National Bureau of Statistics data. While on the industrial side, the nation's crude steel output in Sept fell 5.6% YoY to 82.11m tons, although the output in the first nine months was still 1.7% higher than the same period last year and stood at 795.07 million tonnes. In the physical market today, iron ore prices for portside inventories and seaborne cargoes retreated after five days of increase. Nov futures ticked up 50 cents from last night's closing and good sizes traded at above \$188.5, before coming off quickly to \$116 and then staying rangebound during the London morning. Dec fell from \$116 to sub \$114 and Jan traded at the low of \$111.75. On the spreads trading, interest was mainly on Oct/Nov with most of the volumes changing hands at \$1, on the far back Q2/Q4 traded at \$7.15 in 15kt.
